

More power with powerJobs

Imagine you can create a PDF by click or status change via the Vault job-server. Imagine that jobs are script files and thus easy to customize and enhance. Have we caught your attention?

powerJobs uses the Windows PowerShell technology. Jobs that are available as scripts and can be easily create, adapted and enhanced. The tools are already installed on your Windows 7 and Server 2008 R2, and are free for previous Windows versions.

Ready to go

2 jobs are included in powerJobs to generate PDFs of individual documents or all documents in a folder. So that you can get started immediately with powerJobs. You only need a computer with Vault Workgroup, Collaboration or Professional in version 2011 and the required CAD software. The installation is done in minutes, without previous knowledge. The jobs can be queued via the powerJobs menu, or via the status change.

Configuration of PDF creation on status change

With the Lifecycle Event Editor supplied with Vault, you can configure at which state transition PDFs are generated. In the script, you determine for which file types PDFs can be created, e.g. only drawings.

PDF as attachment

The PDFs are stored in the Vault as a visualization file and linked to the original as an attachment. The PDFs can be made visible or invisible via the visualization option.

Create your own scripts

The scripts can be easily adapted. The Microsoft PowerShell tools are already installed on current Windows version or may be downloaded free of charge for earlier versions. Thus adjustments are quickly made, e.g. for which document type a PDF can be created.

Cool and simple

New jobs are created quickly. Just create and save your script file into the powerJobs directory and declare the job. PowerShell, and so powerJobs, supports the .Net Framework and the Vault API. Thus powerful jobs can be created. The syntax is learned quickly and it is easy to understand even for non-developers, at least to make minor adjustments. Examples and tips can be found on the coolOrange forum - <http://forum.coolOrange.net>.

powerJobs generates PDFs of your documents via the Vault Job Server. The jobs can be easily customized to your needs. Minimal knowledge is sufficient for installation, implementation and maintenance, also for non-programmers. powerJobs builds on modern Microsoft technology and the tools are already installed. All this is available at an attractive price! Squeeze your potential!
